

Anti-Virus and Anti-Spam Screening

Spend less time filtering the rubbish and more time reading email!

Protecting your incoming e-mail from Viruses, Malware and Spam is time consuming and can cause plenty of issues. Fortunately using our Screening Service, we check messages before your mail server receives them, dealing with the junk and passing you the mail that matters most.

Screening services give you hassle free, clean email.

Protection for your email against viruses

Viruses are a real threat to E-Mail users today, and have become significantly more advanced over the past few years. Many e-mail viruses can mutate (change the way they appear to users) or adapt over time, or hide inside innocent looking files.

To avoid this, you may install a normal Anti-Virus Application. This seems like a good idea, but won't protect you against viruses properly. How do you control remote users via WebMail, those using mobile phones, and make sure it is up to date regularly? Our screening service deals with messages before they ever reach your devices and computers.

Anti-Spam Filtering

By many records Spam now accounts for 75-80% of all e-mail transmitted - that's a lot of junk arriving on your system to be processed, and significant time wasted for your staff. Our platform proactively scans and detects the vast majority of spam before it reaches you automatically. Anything that isn't wholly detected can be reviewed by you if you so wish.

Key Features

- ✓ Internet Based Scanning
- ✓ No hardware needed
- ✓ No software needed
- ✓ Optionally have junk redirected to another place for manual review

Protects your...

- Desktop Computer
- Laptop Computer
- Mobile Phones
- iPads and Tablets
- Works with PC and Mac
